

AXIS Store Reporter

Dynamic interface for understanding data

AXIS Store Reporter is a web-based tool that gathers data from supported Axis people counting applications. You can access the data from any platform, including desktops, tablets and smartphones using any operating system. The dynamic dashboard gives you an overview of statistics and graphical representations from multiple installations and camera units with different embedded applications. This user-friendly tool supports several languages and offers highly customizable, pre-defined analytics reports. Furthermore, all reports and findings, including the dashboard itself, can be exported to PDF and Excel[®] formats and shared via email.
